

TIF Image File Explanation

All of the OGB forms contained in the Board's Well Record Files for the well with the selected permit number have been electronically scanned and saved as TIF image files. Each file includes the Form number as a part of its name (e.g. OGB-1). Multiple copies of the same form (e.g. OGB-12) are distinguished by a "V" (or version) number and have been assigned "V" numbers chronologically. For a given Form, the highest "V" number is the most recently submitted form and would be considered the current or "active" form for the well in question.

This document imaging project commenced in late Summer 2006 with Permit No. 3000 and continues forward sequentially to the higher, or more recent, permits. Additionally, all forms for wells with permit number 15000 or greater are being scanned when each well is permitted and as each new Form is added to the Well Record Files. These image files will be posted to this web site on a weekly basis as they become available.
